

## Hypodermoclysis Education Resource Package

### Suggested Use

The Hypodermoclysis Education Resource Package contains the following items:

- Calculate the Flow Rate Practice Sheet
- Calculate the Flow Rate Practice Sheet – Answer Key
- Hypodermoclysis in LTC PowerPoint
- Hypodermoclysis Quick Reference Guide

### **Options:**

There are a few options to provide education to your PCH staff on Hypodermoclysis and the decision of which one to use will largely depend on your PCH staff's comfort level, type of learner and what would work best for the type of learner, Educator preference, amount of time available to provide education, and how your PCH has decided it will be using Hypodermoclysis.

1. Use the Hypodermoclysis in LTC PowerPoint in full and provide a session
2. Have staff review the Operational Guideline in advance and conduct a review in a Huddle format
3. Use the Quick Reference Guide as a periodic review (should not be used as standalone education – the Operational Guideline should always be reviewed as part of the education)
4. Use portions of the Hypodermoclysis in LTC PowerPoint to address any specific areas of concern – in Huddle or Poster formats
5. Use the Calculate the Flow Rate Practice Sheets as needed for any staff having difficulty with calculating the drip rates.

If you have any questions, concerns or you require more resources, please reach out to Sheila Smith, Regional Educator – [ssmith32@wrha.mb.ca](mailto:ssmith32@wrha.mb.ca)

\*To perform Hypodermoclysis, the following resources have been made available:

- LTC Program Subcut Insertion and Removal Operation Guideline (revised)
- LTC Program Subcut Med Administration Operational Guideline (revised)
- LTC Program Hypodermoclysis Operation Guideline (new)
- Hypodermoclysis Resources:
  - o Hypodermoclysis Decision Guide
  - o Hypodermoclysis in PCH Prescriber Info
  - o Hypodermoclysis Supply List
  - o Hypodermoclysis Signage
  - o Sample Fluid Balance Sheet
  - o Stop and Watch Monitoring Form
