SMART MEDICATION TRACKING

Aura syncs with the Cling® App to supply the wearer with medication compliance alerts. The Cling® App can be loaded with the wearers multi medication schedule and it will automatically track the wearers compliance and their various medication current inventories. It is easy to add new medications or to delete old medications from the App as required.

REMOTE HEALTHCARE MANAGING SYSTEM

With the Aura Healthcare Managing App a wearer's designated family members or caregivers can be authorized to monitor the Aura wearer's meds intake as well and their current medication inventory as well as their Heart Rate, Blood Pressure fluctuation, steps taken, and exercise activities all through a secure website. The family and caregivers can also send in-app medication alerts to the wearer in the Cling® App.

The Leap and Aura offer the wearer a robust feature set including UNIQUE Medication Tracking and Inventory monitoring and Remote Family or Healthcare Provider Monitoring of the wearers Health Stats and Medication Compliance/inventory along with a data rich App and a suite of fitness and health tracking features at an affordable price.

Tracking devices with comparable features sell for as much as \$400 and still don't have our Mediation tracking and remote monitoring ability.

The Leap and Aura color screens offer the wearer unparalleled screen functionality with up to a 20-day battery life between charges.

The Leap and Aura each have unique features but share the following features:

- Blood Pressure Fluctuation monitoring
- Heart Rate monitoring
- Heart Rate Zone Training
- High Heart Rate Alert
- Up to a 20 day battery life between charges
- Built in (Leap) or Assisted (Aura) GPS
- Automatic Push Notifications or texts, email, phone calls, news etc.
- One Touch Cell Phone Call Rejection
- Track steps taken in real time
- Track sleep cycle patterns including 15 minute naps
- Challenge other MedTech device wearer's through the training and exercise social media community
- Create Teams and share your health and exercise stats along with your meds compliance and inventory
- Built in training and exercise suggestions
- Track calories burnt by specific workout (running, hiking, walking, running, cycling, aerobics, elliptical, treadmill etc.).
