

Environmental Health Logic Model

Goal: To protect the health of Winnipeg Health Region residents by partnering with others to influence environmental factors that impact health.

Context: WRHA Environmental Health MOHs assess the risk to the public health, safety or well-being from environmental hazards. These hazards may be in the indoor and outdoor air, drinking and recreational waters, soil, weather, housing, buildings, streets, industry, development in Winnipeg. They work towards management of these issues through collaborations with their partners, communications to the public; and recommendations to policy makers.
