

Searching for existing clients in the HPECD Database

There are several alternatives to using a client's name for searching for existing records before adding a new one.

1. MFRN Identifier – this will account for infants as well that are connected to the mother

The screenshot shows the 'Client Search' interface. The 'Identifier Name' dropdown menu is open, and 'MFRN' is highlighted with a red box. The interface includes fields for Last Name, First Name, Record Status, Office, Identifier Name, Identifier Value, Date of Birth, and Gender. There are also buttons for Search, Delete, and Clear Search, and a 'No Data To Display' message.

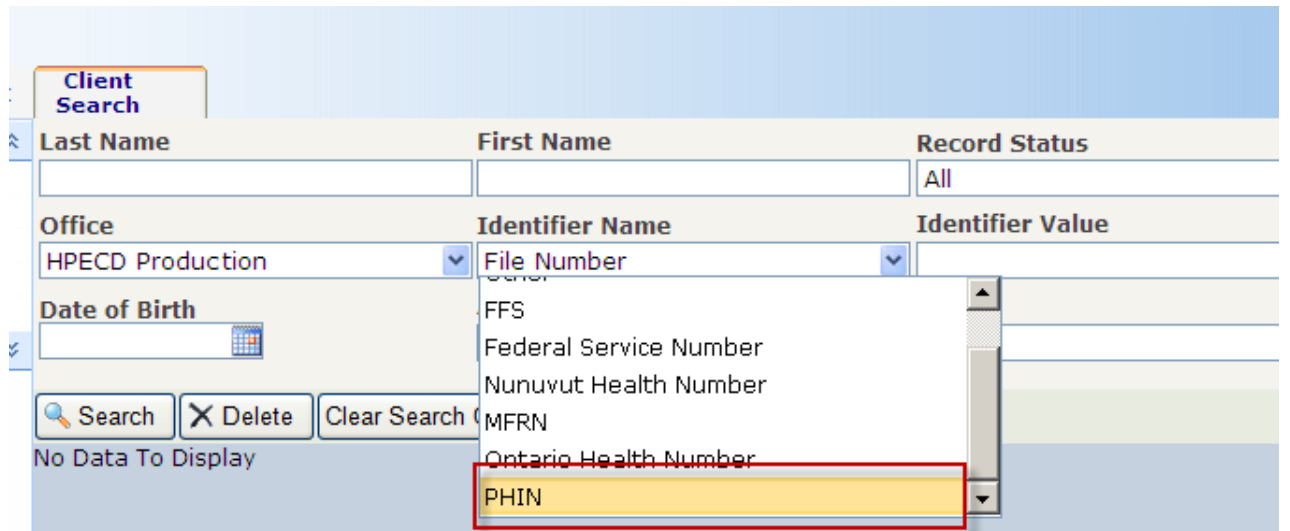

Last Name	First Name	Record Status	Provider
		All	All

Office	Identifier Name	Identifier Value	Gender
HPECD Production	File Number		All

Date of Birth:

No Data To Display

2. Search by PHIN Identifier

The screenshot shows the 'Client Search' interface. The 'Identifier Name' dropdown menu is open, and 'PHIN' is highlighted with a red box. The interface includes fields for Last Name, First Name, Record Status, Office, Identifier Name, Identifier Value, Date of Birth, and Gender. There are also buttons for Search, Delete, and Clear Search, and a 'No Data To Display' message.

Last Name	First Name	Record Status
		All

Office	Identifier Name	Identifier Value
HPECD Production	File Number	

Date of Birth:

No Data To Display
