

Program: Unified Referral and Intake System Logic Model

Description: URIS supports community programs to support children with specific health care needs. Community programs eligible for URIS support include schools, licensed child care facilities, selected recreation programs and agencies providing respite services. URIS provides a standard means of classifying the complexity of health care needs and establishes the level of qualification required by personnel to support children with these health care needs. Health care needs that are classified as 'Group B' can be delegated to non-health care personnel who receive training and monitoring by a registered nurse. For children with 'Group B' health needs (e.g., anaphylaxis), the nurse develops and maintains a written health care plan and trains community program personnel that are responsible for the child.
