

YOUR HOME CLINIC

A home base for your health care needs

- Helps you stay well • Gives you support with managing chronic conditions • Provides care designed around you and your health history • Offers fast and efficient access to primary care • Helps co-ordinate care you receive from other providers like specialists

When you enroll with a primary care clinic where you receive most of your health care, that clinic is called your *home clinic*.

Your *home clinic* is where you go first for a whole range of health issues including:

- preventative care such as routine checkups
- treatment of minor ailments such as an ear infection
- management of chronic diseases like diabetes
- serious conditions such as a cancer diagnosis that may require referral to specialist services

Your *home clinic* is a key part of your health care, with your family doctor or nurse practitioner acting as the main co-ordinator.

**Home Clinics are part of a larger strategy to ensure ongoing,
accessible, high-quality care for all Manitobans.**
